Producing a Video Using a State-of-the-art Simulator to Promote Safe Coexistence Between Commercial and Recreational Vessels

The Canadian Maritime Pilots Association (CMPA) produced a video using the MSRC's state-of-the-art simulator to promote the safe coexistence between commercial and recreational vessels.

Produced in collaboration with Transport Canada's Office of Boating Safety and the National Search and Rescue Secretariat, this video provides an appreciation of a pilot's unique perspective by bringing the viewer aboard a virtual bridge using technology operated at the Maritime Simulation and Resource Centre, a division of the Corporation of Lower St. Lawrence Pilots.

This video was distributed to Canadian boating associations and boating schools throughout the country.
